Experiment - 6

Student Name: Suraj Kumar Dev   **UID:** 23BCS10980

Branch: BE-CSE   **Section/Group:** KRG_3A

Semester: 5th   **Date of Performance:** 25/9/25

Subject Name: Advanced Database and Management System

Subject Code: 23CSP-333

1. Problem Description/Aim:

Medium-Problem Title: Gender Diversity Tracking-Create a PostgreSQL stored procedure to track gender diversity in the workforce. The procedure takes a gender as input and returns the total number of employees of that gender, providing HR with instant and secure reporting.

Procedure (Step-by-Step):

1. Create a table employees with columns like emp_id,emp_name and gender.

2. Insert sample data with varying genders.

3. Create a stored procedure 'count_employees_by_gender' that:

   - Takes a gender as input.

   - Counts the number of employees with that gender.

   - Returns the result as an OUT parameter.

4. Call the procedure in a DO block to capture and display the result.

Sample Output Description:

   - Input: 'Male' --- Output: 3

   - Input: 'Female' --- Output: 2

   -HR sees results instantly without accessing full employee data.

Hard-Problem Title: Order Placement and Inventory Management-Automate the ordering process in a retail company. The procedure validates stock availability, logs sales, updates inventory, and provides real-time confirmation or rejection messages.

Procedure (Step-by-Step):

1. Create products table with columns: product_id, product_name, price, quantity_remaining, quantity_sold.

2. Create sales table with columns: sale_id, product_id,

quantity, total_price, sale_date.

3. Create a stored procedure place_order that: - Takes product_id and quantity as input.
   - Checks if quantity_remaining is sufficient.
   - If yes:
   - Logs the sale in sales table.
   - Updates products(decrease quantity_remaining, increase quantity_sold).
   - Display "Product sold successfully!!".
   - If no:
   - Display "Insufficient quantity available!!"
4. Call the procedure for different orders to validate functionality.

Sample Output Description:

- Order 5 units of Smartphone (stock available): "Product sold successfully!".
- Order 100 units of Tablet (insufficient stock): "Insufficient Quantity Available!".
- Inventory updates automatically for successful orders.

2. **Objective:** The objective is to automate critical business operations using PostgreSQL stored procedures. For HR, it tracks gender diversity by returning the total count of employees by gender. For retail, it manages orders by validating stock, logging sales, updating inventory, and providing real-time confirmation or rejection messages. This ensures efficiency, accuracy, and real-time insights in both workforce and inventory management.

3. **SQL QUERY AND OUTPUTS -**

-------------------------------------MEDIUM PROBLEM-------------------------------------

```
CREATE TABLE employees ( emp_id
  SERIAL    PRIMARY    KEY,
  emp_name VARCHAR(100),
  gender VARCHAR(10)
);

-- Sample data
INSERT INTO employees (emp_name, gender) VALUES
('Amit', 'Male'),
('Priya', 'Female'),
('Ravi', 'Male'),
('Sneha', 'Female'),
('Karan', 'Male');
```

```
select * from EMPLOYEES; ----CREATING
A PROCEDURE----
CREATE OR REPLACE PROCEDURE
    count_employees_by_gender( IN input_gender VARCHAR,
        OUT total_count int
)
LANGUAGE plpgsql
AS $$
BEGIN
   SELECT COUNT(*) INTO total_count
   FROM employees
   WHERE gender = input_gender;
END;
$$;

---CALLING   THE   PROCEDURE-----
DO
$$ DECLA
RE
   result INT;
BEGIN
   CALL count_employees_by_gender('Male', result);
   RAISE NOTICE 'TOTAL EMPLOYEES OF GENDER Male ARE %', result;
END;
$$;
```

```
16
17      select * from EMPLOYEES;
```

Data Output   **Messages**   **Notifications**

	emp_id [PK] integer	emp_name character varying (100)	gender character varying (10)
1	1	Amit	Male
2	2	Priya	Female
3	3	Ravi	Male
4	4	Sneha	Female
5	5	Karan	Male

```
33    DO $$
34    DECLARE
35        result INT;
36  v BEGIN
37        CALL count_employees_by_gender('Male', result);
38        RAISE NOTICE 'TOTAL EMPLOYEES OF GENDER Male ARE %', result;
39    END;
```

Data Output   **Messages**   **Notifications**

```
NOTICE:  TOTAL EMPLOYEES OF GENDER Male ARE 3
DO

Query returned successfully in 104 msec.

```

ID ==3 means laptop are 20 only and we place order for 100 …so we get notice - for insufficient quantity!!
